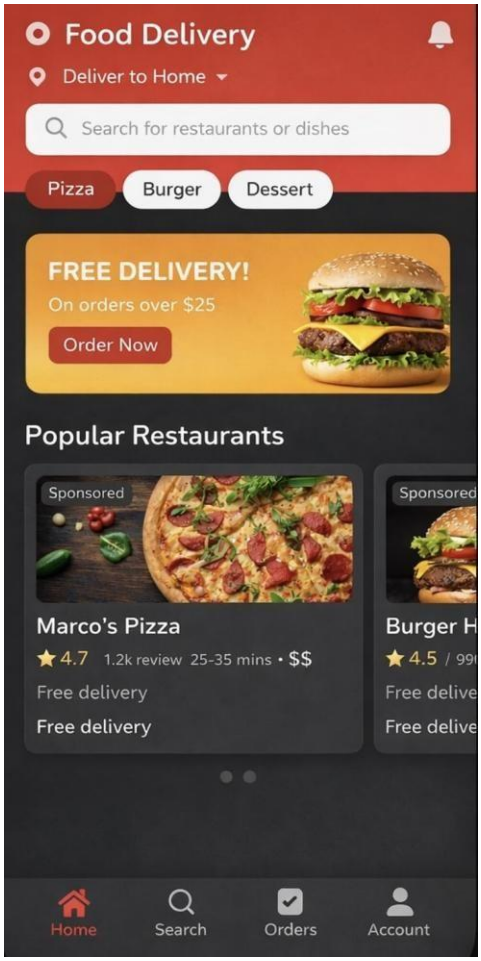
Experiment 7

Name:SRIVATSEN.S 240701534

AIM:

To design multiple UI layouts for a food delivery application, collect user feedback, and improve the design based on the responses. **UI 1 (Dark theme)**

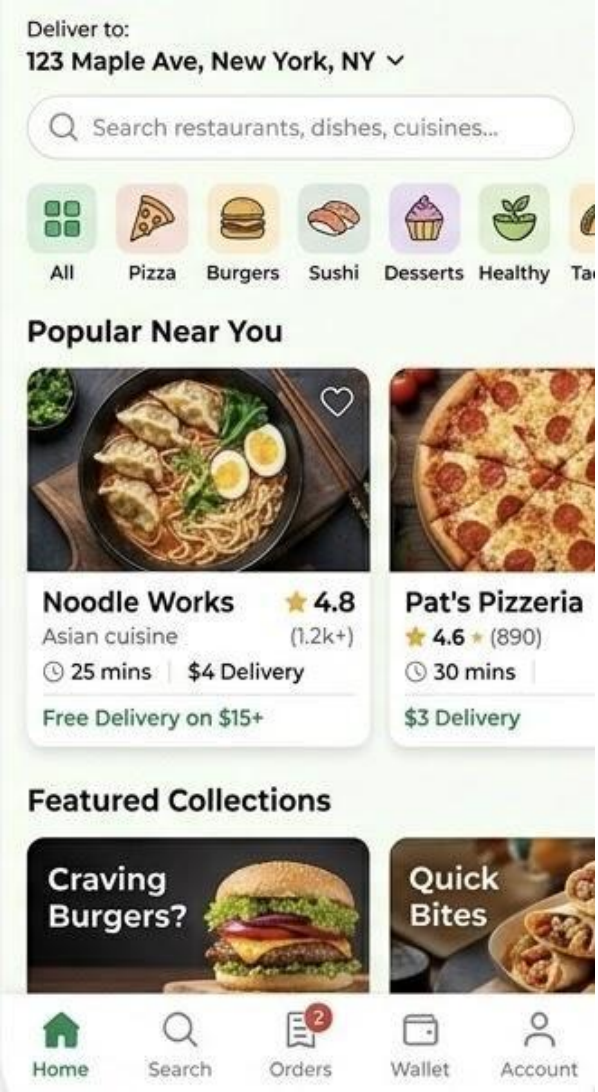
- Uses a dark background with strong red/orange header, which creates good contrast but feels visually heavy.
- The promotional banner (free delivery) is prominent, but takes a lot of space compared to useful content.
- Restaurant cards are slightly crowded, with repeated text like “Free delivery” reducing clarity.
- Bottom navigation is clear, but overall spacing and hierarchy can be improved for better readability.



UI 2 (Clean white theme)

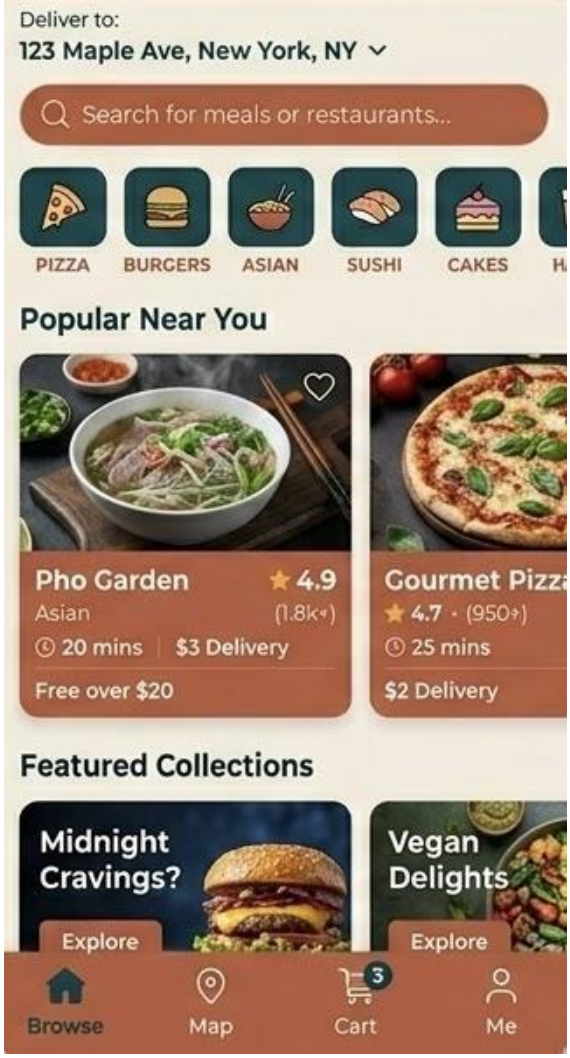
- Clean and minimal layout with proper spacing, making it easy to scan content.
- Category icons are well placed and easy to understand, improving navigation.

- Restaurant cards are neatly designed with clear ratings, time, and delivery info.
- Lacks a strong visual highlight (like banner/offer), making the screen slightly plain.



UI 3 (Soft color theme)

- Uses warm and soft colors, giving a modern and attractive look.
- Categories are clearly labeled and visually appealing with consistent icons.
- Cards and sections are well structured, but color tones reduce contrast slightly.
- Some elements blend together due to similar colors, affecting quick readability.



User Feedback (Survey Results)

- Users felt the UI looked visually attractive but too heavy due to dark colors.
- Many said the banner is distracting and oversized.
- Some users found it slightly difficult to quickly scan restaurant details.
- Users expected better spacing and cleaner layout like modern apps.
- They suggested adding more visual hierarchy and cleaner design.

Food Delivery App UI Feedback Survey

This survey is conducted to evaluate different UI designs of a food delivery app based on aesthetics and usability. Please review the designs and provide your feedback.

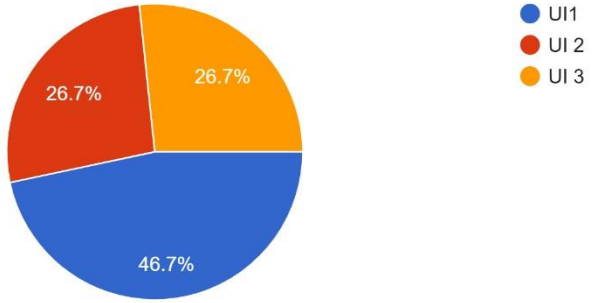
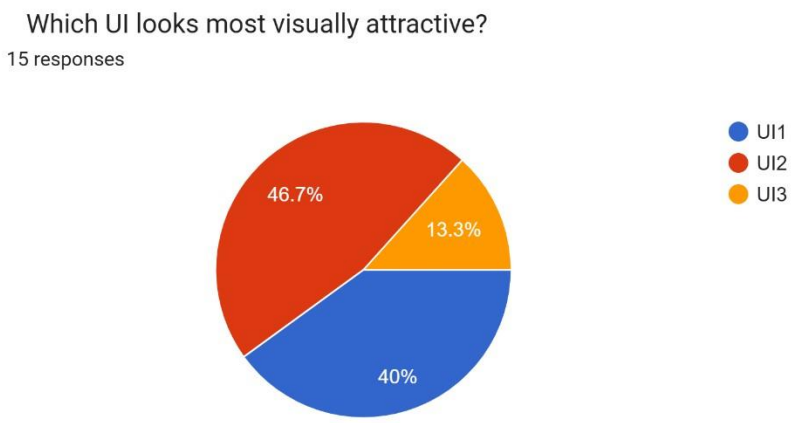
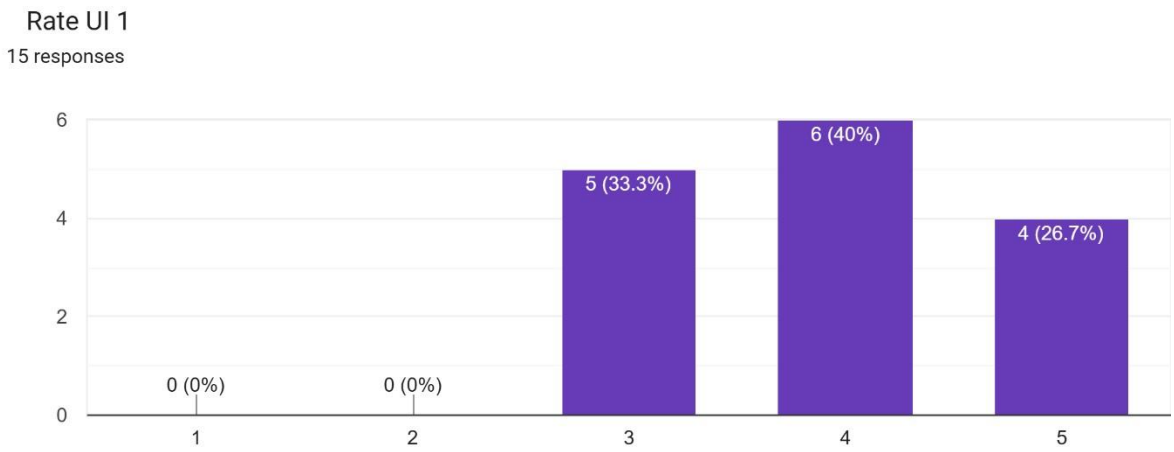
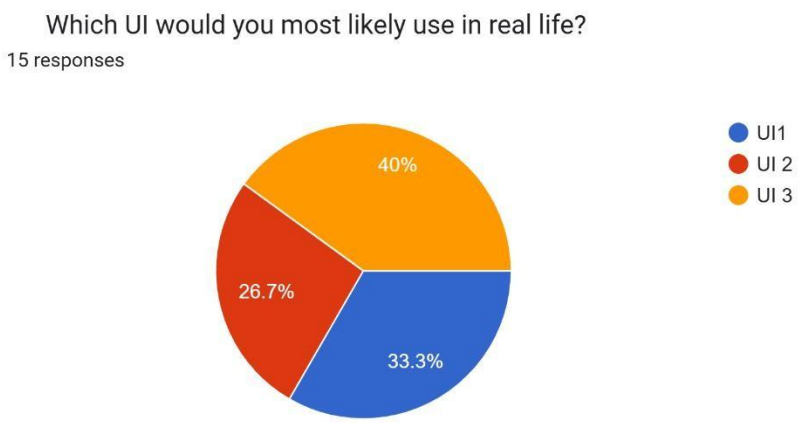
Which color scheme do you like most?

15 responses









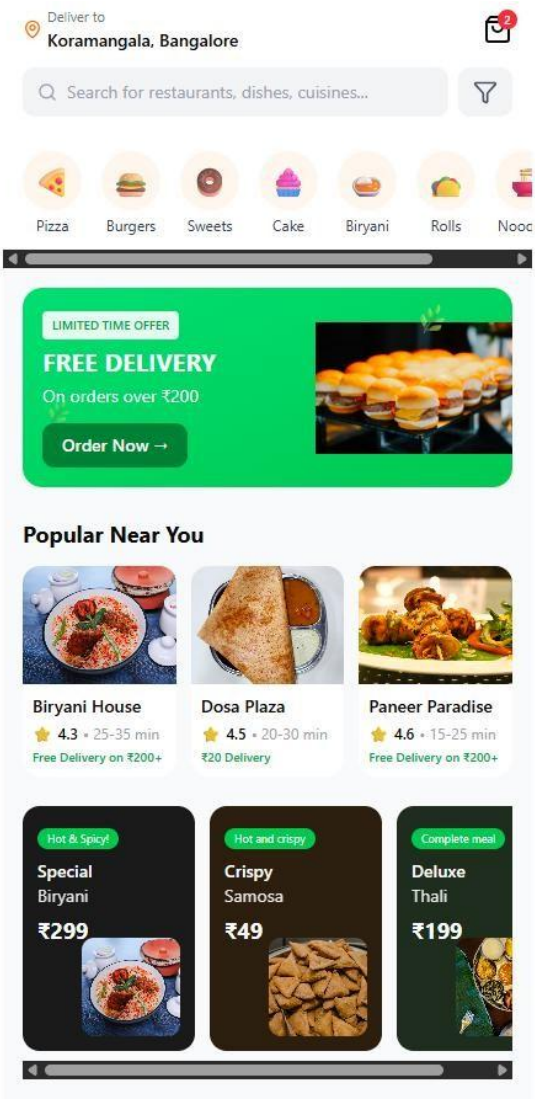
User Feedback (Survey Results)

- Users felt the UI looked visually attractive but too heavy due to dark colors.
- Many said the banner is distracting and oversized.
- Some users found it slightly difficult to quickly scan restaurant details.
- Users expected better spacing and cleaner layout like modern apps.

- They suggested adding more visual hierarchy and cleaner design.

Improvements Made

- Reduced the banner size and made it more balanced with the layout.
- Switched to a lighter and cleaner background for better readability.
- Removed duplicate text and improved content clarity.
- Added proper spacing and alignment between sections.



CONCLUSION:

This experiment helped me understand the importance of user feedback in UI design. By analyzing user responses, I was able to identify design issues and

improve the overall user experience. The final design is more effective, clean, and aligned with user expectations.
